Committed declaration
IDs, releases, runtimes
GPUs, class, region
Records available at the gate
Aggregate verification
Workload-feasible projection
Total and daily-tail risk fit
Validation accuracy budget
Indexed execution
Contiguous runtime blocks
Capacity and energy checks
Recomputed risk residual
Independent meter
Post-event execution ledger
Observed energy and timing
Scoring only; no event label
Payment activation
Frozen contract + closed meter
Payable reduction: their cap
Declaration replay is separate
Signed grid value
Same mapped workload profile
All finite N–1 contingencies
Value cap and participant shares
